

What is RehaCom Cognitive Therapy?

Our office provides **RehaCom Cognitive Therapy** for patients with age associated memory changes, mild cognitive impairment, early onset dementia or recovering from a stroke, brain injury, or other cognitive functional difficulties such as ADHD.

RehaCom, an **evidenced based, clinically endorsed, and established** part of cognitive rehabilitation for the past **25 years**. It consists of **20+ computerized therapy modules** to improve cognitive functions in areas such as alertness, attention, memory, thinking skills and decision making. Each module is **self-adaptive**, and contains **hundreds of tasks with different levels of difficulty**: from very easy – to highly complex tasks. Improved brain functioning leads to **increased self-confidence and self-esteem**.

This is an affordable program tailored individually to your goals. Please contact the office at **(772)-231-5554** for specific info on pricing and scheduling. We look forward to hearing from you!

Who would benefit from RehaCom?

- **Memory Changes Associated with Aging:** RehaCom can help with memory-based impairments such as the early onset of dementia.
- **Stroke/Traumatic Brain Injury:** Several studies have evidenced **greater recovery rates** among patients that implemented RehaCom into their rehabilitation after recently experiencing a stroke or traumatic brain injury.
- **ADHD:** RehaCom could be helpful as one adjunct module in the complex treatment of ADHD.³
- **Visual Problems as a result of Stroke and/or Brain injury**
